IHC-MM-323
29 June 1972

UNITED STATES INTELLIGENCE BOARD
INTELLIGENCE INFORMATION HANDLING COMMITTEE

MEMORANDUM FOR: IHC Members

SUBJECT : Registration of Unclassified
Intelligence Data Standards

1. The Standards Panel of the System Design and Development Subcommittee (SD&DS) recently requested that the SD&DS forward the proposal set forth in the Attachment for IHC approval.

2. Briefly, the Standards Panel wishes to register the Content Control Code with the National Bureau of Standards as an Intelligence Program data standard. If IHC approves the request this will constitute the first standard to be registered with NBS under the terms of the program called for in DCID 1/15. The Support Staff will assume responsibility for informing USIB and establishing maintenance procedures with NBS.

3. At its regular meeting on 21 June 1972 the SD&DS agreed to forward the Standards Panel request for IHC approval. **STAT**
Please inform the Support Staff of your concurrence or objection by CoB 18 July 1972.

UNITED STATES INTELLIGENCE BOARD
INTELLIGENCE INFORMATION HANDLING COMMITTEE
System Design and Development Subcommittee
Standards Panel

MEMORANDUM FOR: Chairman, SD&DS

SUBJECT : Registration of Unclassified Intelligence
Data Standards

REFERENCES : a. National Bureau of Standards, Federal
Information Processing Standards 19
(FIPS 19), Guidelines for Registering
Data Codes, 1 February 1972

b. SD&DS-SP-M-16, 11 May 1972, Confidential

1. Reference a. set forth the responsibility of Federal departments and establishments to register program and agency codes (including those under development) with the National Bureau of Standards, as originally ordered by the Office of Management and Budget Circular A-86, Subject: Standardization of Data Elements and Codes.

2. Under DCID 1/15 responsibility for the development of codes as program standards for the intelligence community rests with IHC. Consequently, the Standards Panel at its sixteenth meeting (reference b.) agreed that the IHC Support Staff shall register all applicable intelligence program standards with the National Bureau of Standards, after obtaining descriptions of the standards and other such support from the Assigned Responsible Agency (ARA), provided the standard itself is unclassified and the necessary backup and explanatory reference material is also unclassified (e.g., the Content Control Code).

FOR OFFICIAL USE ONLY

6. Description

The Content Control Code, first issued by the United States Intelligence Board in 1967, was designed primarily to give authors a concise, easily remembered code which would indicate the content of their messages, reports, and documents for disseminators and readers. The code has two schedules--geopolitical and subject. The geopolitical code is a three character alphabetic code, which consists of a one character prefix indicating the region of the world (or universe) and a two character code which indicates the country, water body, or celestial body. The last two characters are compatible with and in most cases identical to Federal Information Processing Standard #10 (Countries, Dependencies, and Areas of Special Sovereignty), but are not limited to countries. The subject schedule contains 62 four character alpha codes indicating the subject content of the document plus modifiers and identifiers which further specify the information contained therein. The use of one geographic (3) and one subject (4) code would fix the length at a total of seven characters. However, the number of codes used and the number of modifiers is variable, since it depends on the number of countries and subjects mentioned in the document. The geopolitical schedule is updated when necessary; the subject schedule is presently being modified and tested.
